Day 3: February 2, 2013													
9:00 – 10:15 a.m.	<p>Adapting to the Impacts of Climate Change & Mitigating Emissions of Greenhouse Gases and Associated Co-benefits</p> <p><i>The Special Report on Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation brought out by the IPCC highlights the increase in frequency and intensity of extreme events in several parts of the world. This adds a new dimension to adaptation measures which would have to be undertaken to deal with the challenge of climate change. As yet funding for adaptation measures at the international level for the benefit, particularly of the least developed countries, is largely deficient. So also is adequate knowledge and experience with adaptation measures. Reduction of emissions of greenhouse gases carries a large number of co-benefits such as higher energy security, health benefits due to reduced air pollution and higher agricultural output. A recent ILO study has also focused on the employment benefits of a green economy.</i></p> <p><i>The session would focus on how the most vulnerable regions of the world can deal with the challenge of adapting to the impacts of climate change. The session would also develop a comprehensive rationale for measures by which these co-benefits can be fully realized while mitigating emissions of greenhouse gases.</i></p> <p>Moderator: Mr John Vidal, Environment Editor, The Guardian, U.K.</p> <p>Keynote Address: The Hon’ble Greg Selinger, Premier of Manitoba, Canada</p>

10:15 – 10:30 a.m.	Tea	
10:30 – 11:45 am	<p>Choices before the BRICS and a New Economic Construct</p> <p><i>Mahatma Gandhi rightly emphasized efficient use of resources, and he also stated that growth speed is irrelevant if we are going in the wrong direction. The BRICS nations are registering, in general, high rates of economic growth, which would increase their appetite for energy and other resources to fuel development and growth. This would not only lead to constraints in supply of these resources but also problems of pollution and ecological risks. How should the BRICS nations evolve a new paradigm of growth and development by which they can avoid the pitfalls that some developed countries have fallen into?</i></p> <p>Moderator: Ms Suhasini Haidar, Senior Editor, CNN-IBN, India</p> <ul style="list-style-type: none"> • Prof. François Mancebo, Full Professor (Planning & Sustainability), Rheims University and Head of the International Research Center on Sustainability (IRCS) of Rheims, Rheims University, France • Dr Anindya Chatterjee, Regional Director, Asia, International Development Research Centre (IDRC), India • Dr Prodipto Ghosh, Distinguished Fellow, TERI, India • Mr Peter Kenmore, Representative in India, Food and Agriculture Organisation (FAO), India • Ms Amina Mohamed, Deputy Executive Director, United Nations Environment Programme, Kenya • Mr Adam Koniuszewski, Chief Operating Officer, Green Cross International, Switzerland • Mr Khalid Malik, Director, Human Development Report Office, United Nations Development Programme, USA • Mr Walter Vergara, Chief, Climate Change and Sustainability Division, Inter-American Development Bank, USA
